

LIMITED TIME OFFER!

- ✓ Save money now with a rebate on your purchase.
- ✓ Save money later with lower water bills.
- ✓ Save water for our future.

HOW DO YOU GET A REBATE?

1. Purchase one or more of the qualifying products.
2. Install the product(s) in your home or garden.
3. Complete and mail in an application form (available at marinwater.org/rebates) with the original itemized receipt(s).

The fine print: Rebates are available to single-family and duplex residential customers. Limit: one rebate per product category per customer. Customers may purchase one or more products for up to \$250 in rebates for all five. Limited time offer: Rebates will be processed on a first-come, first-served basis while funding lasts. **Products must be purchased on or after October 25, 2014.** Please carefully review qualifying product information and complete terms and conditions on the application form.

Pool Covers

A pool cover is a highly effective water and energy conservation device. Regularly using a pool cover reduces water loss due to evaporation by up to 95%. A cover also can shrink your energy bills by preventing heat loss. Pool covers come in a wide range of types and costs. Consult your pool service company, builder, or pool retail store to find the right type and fit for your pool.

Hot Water Recirculating Systems

Tired of waiting for your shower to warm up in the morning—and tired of watching all that water go down the drain while you wait? Hot water recirculating systems use a pump and bypass valve to recirculate water back to the hot water heater until it reaches the desired temperature. Studies show some households can save as much as 12,000 gallons per year!

Organic Mulch

In addition to saving water, organic, plant-based mulches such as bark, straw, or compost return nutrients to the soil as they decompose. Bare soil can dry out quickly and is an open invitation to water-thirsty weeds. Adding a 3-inch layer of mulch to your planting beds helps retain soil moisture, suppress weed growth, prevent soil erosion, and moderate soil temperatures.

- ✓ Get a rebate up to \$50 for each product category.
- ✓ Pick and choose the product categories that make sense for your home.
- ✓ Purchase more than one for up to \$250 in rebates for all five.
- ✓ Visit marinwater.org/rebates for complete details.

Laundry-to-Landscape System Components

Reusing water from your clothes washer to irrigate your garden is one of the simplest, least expensive ways to “go gray.” Just one person’s laundry can generate enough graywater to sustain one to two trees. Basic laundry-to-landscape systems don’t require permits or alteration to existing plumbing. MMWD’s rebate is for the purchase of a 3-way adapter valve and/or air vent, two required components.

Rain Barrels

Seize those storms! Just 1 inch of rain on a 1,000-square-foot roof produces about 600 gallons of runoff. Rain barrel systems can be a great way to harvest some of this rain water to supplement irrigation needs. They provide naturally good quality water for your plants and reduce storm runoff, helping to prevent erosion and pollution of our local creeks and waterways.
