To:
Board of Director MMWD

As a 47 year long residents of Sausalito, my wife and I are expressing our strong opposition to the fines the Board has imposed to Tier II water users as abusive and excessive. We further strongly object to the board considering the building of a 90 million dollar pipeline to transport water across the Richardson Bridge. Are the Tier II fines going to support this pipeline? We are of the opinion that dry and wet years come and go and believe that improvements could be made to the existing reservoirs in Marin County so that you can better store the blessed runoffs. And/or consider a desalination plant.

It is ridiculous that you are planning on penalizing property owners who invested large amounts of money in their gardens to stabilize their hillside lots from mudslides are now subjected to these onerous and usury fines. We are bound to lose our landscaping if not allowed to irrigate our lots.

Sincerely,
Dr. and Mrs. W. Dilworth Cannon

Dear Ms. Koehler,

Please continue to build the pipeline across the Richmond-San Rafael Bridge. Another drought is inevitable, and without that pipeline the district does not have a reliable alternate source of water. The Sonoma dams and the Russian River have the same drought profile our reservoirs do.

In terms of purchasing water, now that we have normal reservoir levels, perhaps you should purchase half the water from Yuba as previously discussed, and/or delay delivery until September and October. Is it more cost effective to purchase late winter or spring time water from the Russian River like NMWD does?

Bottom line, MMWD is a public utility and should do what is reasonably necessary to provide the water customers want rather than use water to change lifestyles or pursue extraneous goals.

Greg Dyer
